14. Has anyone in your family members ever felt ill after taking any vaccinations?		Yes : Name of the vaccine (      ) <input type="checkbox"/> No	
15. Has anyone in your family members ever diagnosed as congenital immune deficiency?		<input type="checkbox"/> Yes <input type="checkbox"/> No	
16. 【Question only for women】 Are you currently pregnant?		<input type="checkbox"/> Yes <input type="checkbox"/> No	
17. If you have any concerns about your health, please write down your comments.			
<b>Doctor's column</b> After medical examination by interview and diagnosis, I've judged today's vaccination is ( Possible / Postpone ). I gave medical explanation to individual and acknowledge about the efficacy and side-effects of the vaccine. <div style="text-align: right;">Doctor's signature      (      )</div>			
After hearing the medical explanation by the doctor and acknowledge about the efficacy and side-effects of the vaccine, I agree to take the vaccination today. <div style="text-align: right;">Signature      (      )</div>			
Name of the vaccine given (      )		Venue (      )	
Injected vaccine's volume (      mL)		Name of Doctor (      )	
Lot number (      )		Time and date of the vaccination ( Time:      /Date:      )	

## To whom to get Flu vaccination

### **Efficacy and side-effects of the influenza vaccine:**

Flu vaccination can be expected to prevent for Flu infection or reduce the severity of symptoms. The vaccine also prevents other health complications that can occur as a result of Flu infection, which can occasionally lead to death. It is commonly known that vaccination can result in slight side effects.

Adverse reactions at the injection site include redness, swelling, hardening of the skin, fever, and discomfort. These side effects usually disappear within two or three days. In rare cases, symptoms such as fever, chills, headache, boredom, temporary loss of consciousness, dizziness, swollen lymph nodes, vomiting, and diarrhea can occur. Individuals allergic to eggs must inform the physician due to the risk of severe side effects.

In addition, there are very rare cases where adverse reactions other than those described above appear as follows:

- (1) Anaphylactic shock, resulting from hypersensitivity (hives, severe difficulty in breathing, etc.)
- (2) Acute scattering-related encephalomyelitis (from a few days after an inoculation to 2 weeks, fever, headache, convulsions, motor control difficulty, loss of consciousness, etc.)
- (3) Phrenitis, encephalosis, myelitis
- (4) Guillain Barre Syndrome (numbness in hands and feet, difficulty walking, etc.)
- (5) Convulsion (Including fever convulsion)
- (6) Liver function disorder, Jaundice
- (7) Asthma attack
- (8) Thrombocytopenia purpura, platelet depletion
- (9) Vasculitis (Including allergic purpura, granulomatous vasculitis, and leukocytoclastic vasculitis)
- (10) Interstitial lung disease
- (11) Mucocutaneous ocular syndrome (Stevens-Johnson syndrome)
- (12) Nephrosis syndrome

Please note it is responsible for employees or family members who receive the vaccine to seek professional medical assistance in the event of a health injury by the vaccination, can follow the necessary procedure as stated by law.

### **Warning: Before Vaccination:**

- (1) If you are unclear about the necessity or the side-effect of taking the vaccination, please seek advice from a doctor
- (2) For the night before the vaccination, please take a bath or shower and keep your body clean as possible
- (3) Please observe your health condition a day before the vaccination and see if there is any irregular health issues
- (4) Please wear clean clothes
- (5) Information you provide for a doctor is essential. Please make sure to write accurate information.

### **You cannot get the vaccine if you:**

- (1) Have fever (over 37.5 °C)
- (2) Are showing the initial symptoms of a severe acute disease.
- (3) Have history of anaphylactic shock after receiving the Flu vaccine or taking any medication (the doctor must be informed immediately)
- (4) Advised by personal doctor not to receive the vaccination.

### **Patients that must seek medical advice prior to vaccination:**

- (1) Receiving guidance from a doctor or community health nurse due to one's slow or stunted growth
- (2) Showing the initial symptoms of a common cold
- (3) Having heart trouble, kidney diseases, liver disease or blood disorders
- (4) Symptoms suggesting allergic reaction within two days after influenza vaccination, such as fever, rash or hives
- (5) History of convulsions
- (6) Patients or their close relatives who were diagnosed as immunity disorder in the past
- (7) Have experienced respiratory system disease including interstitial lung disease and bronchial asthma
- (8) History of allergic reaction to medicine or food derived from chicken(chicken and/or eggs)
- (9) May have recently become pregnant
- (10) Have seen friends or family members when measles, bastard measles, epidemic parotiditis, epidemic parotiditis occurred in epidemics, and you have not yet got the disease.

### **Several tips after you've been vaccinated**

- (1) An acute reaction can occasionally occur after influenza vaccination. It is advisable to stay in the clinical or hospital for observation up to 30 minutes after vaccination so that the doctor can be reachable quickly.
- (2) Be aware of the side effects of the vaccination within 24 hours after the vaccination
- (3) Taking a bath on the day of vaccination does not present any problems, but you should take care not to have excessive contact or rubbing of the injection site.
- (4) Keep the site clean, refrain from consuming large amounts of alcohol, and excessive physical exertion.
- (5) Seek medical advice immediately if you have any abnormal symptoms such as high fever or convulsions.
